PROFESSIONAL SUMMARY

Data analyst with a background in Business Administration and Business Analytics, certified as a Microsoft Fabric Analytics Engineer Associate. I build complete data solutions on Microsoft Fabric: from data ingestion and automated loading with pipelines and T-SQL, to dimensional modeling, Power BI semantic models and data security. I care about reliable data that the business can actually use to make decisions. I am looking for a Data Analyst or BI Analyst position where I can add value on a real data platform.

TECHNICAL SKILLS

- **Microsoft Fabric:** Lakehouse, Data Warehouse, Data Factory (pipelines), OneLake, Medallion architecture, Direct Lake, PySpark notebooks.
- **SQL & data modeling:** T-SQL (stored procedures, views, window functions), dimensional modeling (star schema), ETL/ELT, data quality.
- **BI & visualization:** Power BI (semantic models, DAX, Power Query), Advanced Excel, Looker Studio, MicroStrategy.
- **Data security & governance:** Row-Level Security (RLS), Dynamic Data Masking, access control.
- **Programming, automation & ML:** Python (Pandas, PySpark, Scikit-Learn, XGBoost), Power Automate, n8n, Git; clustering, NLP, RAG architectures.

FEATURED PROJECTS

Financial Data Warehouse on Microsoft Fabric: T-SQL, Pipeline and Security

- Designed a Data Warehouse in Fabric with credit card transaction data: ingestion from a Lakehouse and automated loading through a Data Factory pipeline.
- Built the loading process (ETL) in T-SQL with a transactional stored procedure: error handling with *rollback* and repeatable runs that do not duplicate records.
- Analytical metrics with window functions (running totals, rankings, moving averages) in a reporting-ready view.
- Data security: Row-Level Security by region and Dynamic Data Masking to hide sensitive information (card number, name, date of birth). GitHub →

Olist E-Commerce Intelligence Dashboard (Microsoft Fabric & Direct Lake)

- End-to-end BI solution with Medallion architecture on 100,000+ e-commerce orders: PySpark data cleaning (outlier detection and filtering of atypical periods) and star schema dimensional model.
- Semantic model in **Direct Lake** on Delta tables in OneLake, with organized DAX measures (including year-over-year comparison) and a 3-page interactive report for management, logistics and sales. GitHub →

Salary and Seniority Prediction with Generative AI (Master's Thesis)

- Data pipeline with 50,000+ job postings (API and scraping), cleaning and LLM-based enrichment; XGBoost models to predict salary range and seniority. Job posting generation system using RAG, deployed on Hugging Face Spaces. GitHub →

PROFESSIONAL EXPERIENCE

Data Analyst (Internship) **Nov. 2025 – Jun. 2026**

Universidad Francisco de Vitoria, Madrid

- Owned the full data cycle in reporting projects: data cleaning and preparation, modeling, analysis and presentation of results to end-user teams.
- Used advanced Excel, Power Query and Python to consolidate, clean and validate data from different academic sources before analysis.
- Designed data models and built interactive Power BI reports (DAX, bookmarks, filters), automating institutional reporting.
- Applied statistical and Machine Learning techniques (clustering, Random Forest, regression) to segment profiles and predict academic performance.
- Automated tasks and data ingestion with Power Automate.

EDUCATION

- **Master's in Business Analytics, AI & Machine Learning** | Universidad Francisco de Vitoria 2025 – 2026
- **Bachelor's in Business Administration and Management** | Universidad de Salamanca 2021 – 2025
